Undergraduate Research Internship on Aquatic Macroinvertebrates & Amphibians in Restored Lake Erie Coastal Wetlands.

Description:
Undergraduate research opportunity in Dr. Lauren Pintor’s Lab within the School of Environment & Natural Resources to examine the influence of wetland restorations on macroinvertebrate and amphibian communities within Ottawa National Wildlife Refuge (ONWR). Project will require extensive field work, data collection and analysis. Applicants should have an interest in the fields of community, population and restoration ecology. Applicant not required but encouraged to have a background in macroinvertebrate and amphibian sampling and identification. Applicants should be open to traveling, working outside, working independently, working in the lab, and completing an individual literature review. Chosen Applicant will be expected to write a research proposal for work that compliments on-going projects in the lab and apply for funding through the OSU Undergraduate Research Office’s Summer Research Fellowship. Research will include frequent week-long trips to ONWR near Oak Harbor, OH. Research housing and transportation will be provided.

Timeline:
Ideal start time mid-May with position ending in mid-August 2017 (10 weeks total).

Application Deadline:
Review of applications will begin on 11/15/16 and will continue until the position is filled.

Please send resume and statement of interest to Liz Berg (berg.229@buckeyemail.osu.edu).
